Single dual-supply translating 2-input OR with strobe

Rev. 1 — 10 October 2018 | Product data sheet

1. General description

The 74AVC1T8832 is a single dual-supply translating 2-input OR with strobe inputs. It features two data input pins (A, B), two strobe input pins (STRA, STRB), one data output pin (Y) and dual-supply pins ($V_{CC(A)}$ and $V_{CC(B)}$). Both $V_{CC(A)}$ and $V_{CC(B)}$ can be supplied at any voltage between 0.8 V and 3.6 V making the device suitable for translating between any of the low voltage nodes (0.8 V, 1.2 V, 1.5 V, 1.8 V, 2.5 V and 3.3 V). Pins A, B, STRA and STRB are referenced to $V_{CC(A)}$ and pin Y is referenced to $V_{CC(B)}$.

The logic equation provided at the Y output is:

$$Y = \overline{STRA} \bullet A + \overline{STRB} \bullet B$$

The device is fully specified for partial power-down applications using I_{OFF}. The I_{OFF} circuitry disables the output, preventing any damaging backflow current through the device when it is powered down. In Suspend mode when either $V_{CC(A)}$ or $V_{CC(B)}$ are at GND level, the Y output is in the high-impedance OFF-state.

$\sum(C_L \times V_{CC}^2 \times f_o)$ = sum of the outputs.
